<b>Project Description / Abstract</b>	<p>This project seeks to establish an Internet-based information system for the Great Salt Lake (GSL) to improve understanding and management of the GSL as an integrated system and to provide a single repository for organizing and sharing GSL data. The GSLIS will leverage existing software components from the Bear River Watershed Information System and the GSL Hydrologic Observatory website and will incorporate data and information from many different agencies and organizations. The GSLIS will seek to promote awareness of existing data and research results related to the GSL.</p>
